

PORTABLE PERFORMANCE

ANSUL® Stored Pressure Fire Extinguishers

READY FOR ACTION WHEN YOU ARE.

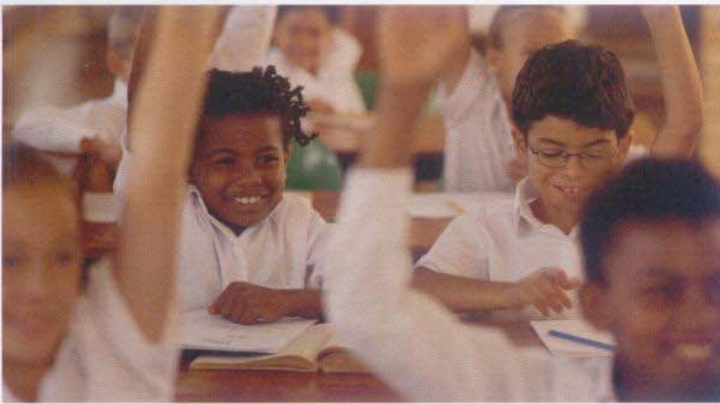

Every year, cooking accidents, unattended candles, electrical failures, careless smoking and other incidents lead to fires that cost businesses plenty. Although most start out small in proportion, each unchecked fire carries the potential to spread rapidly. The full line of ANSUL® fire extinguishers gives you the power to respond when the unexpected happens. ANSUL fire extinguishers are UL and ULC listed, USCG approved and comply with NFPA 10. Powerful, portable and engineered to last, people and industries trust their critical assets to ANSUL fire extinguishers.

ANSUL SENTRY HAND PORTABLE FIRE EXTINGUISHERS

The SENTRY line of portable dry chemical, carbon dioxide and water stored pressure fire extinguishers are made to fight the widest range of industrial and commercial fires in even the tightest, most highly traveled areas.

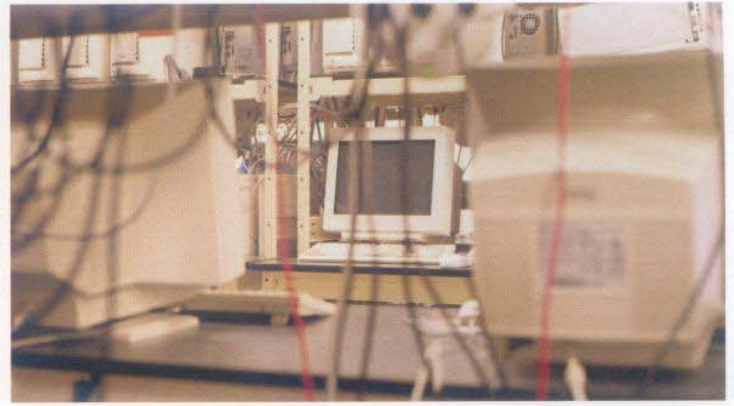

Compact and lightweight, SENTRY extinguishers are made to rigorous ANSUL standards of quality and craftsmanship. Each comes with a six-year limited warranty and includes such standout features as seamless and butt-welded steel or high-strength aluminum shell construction, tough exterior coatings, hydrotesting and leak testing and extruded aluminum, brass or plated steel components. All are backed by the ANSUL worldwide distributor network — now over 1,000 strong.

Within seconds, a SENTRY stored pressure fire extinguisher can well be the difference between a quickly extinguished fire and an uncontrollable blaze.

SENTRY DRY CHEMICAL

Ideally suited for protection of light, ordinary and extra-high hazards, **SENTRY dry chemical extinguishers** are found virtually anywhere a general-purpose fire extinguisher is needed, including auto repair facilities, schools, offices, warehouses and many more.

Seamless steel cylinders are MIG welded at the collars and bottom enclosures, then polyester powder-coated and oven-cured for durability. Other extinguisher components

consist of long-lasting aluminum alloys and plated steel. Sizes range from 2.5 lb. (1.13 kg) to 20 lb. (9.20 kg) agent capacity, with specific agents available to fight Class A, B or C fires.

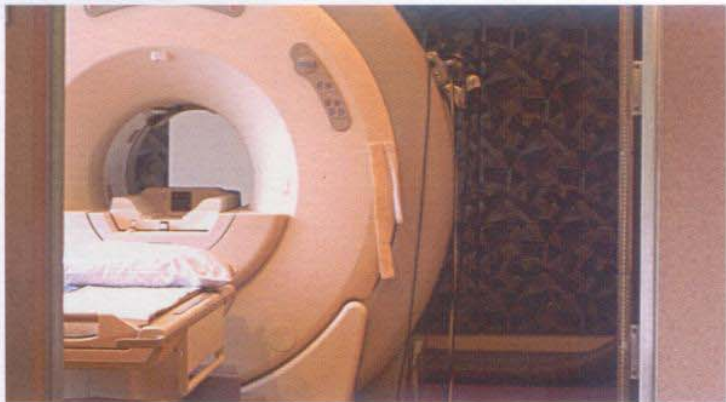

SENTRY industrial dry chemical extinguishers are built to survive in harsh, corrosive environments, such as chemical manufacturing and storage, and in marine environments. Special features include zinc-rich primers for superior corrosion protection, chrome-plated extruded brass valves, stainless steel handles and push levers, plated brass hose couplings and ferrules, and a ring pin and chain assembly.

SENTRY. CARBON DIOXIDE

Designed to protect against Class B (flammable liquids and gases) and Class C (energized electrical equipment) fires, **SENTRY carbon dioxide extinguishers** are well suited for laboratories, areas with electronic equipment, municipal firefighting vehicles and more. Available in one-piece, powder-coated steel or aluminum shells, SENTRY CO₂ extinguishers are available in capacities ranging from 5 lb. (2.30 kg) to 20 lb. (9.20 kg).

SENTRY. WATER

Class A hazards don't stand a chance against SENTRY water extinguishers. With an ample 2.5 gallon (9.46 L) capacity, they're made to the same standards as the rest of the SENTRY line. Butt-welded stainless steel shell construction assures long service life, while stainless steel, brass and aluminum alloy components help eliminate corrosion.

ANSUL. CLEANGUARD. FIRE EXTINGUISHERS

CLEANGUARD clean agent extinguishers answer the call for a product rated for Class A, B and C fires, yet will not damage sensitive and irreplaceable materials, equipment and facilities. Halon 1211 was replaced by DuPont FE-36[®] as an electrically nonconductive, environment friendly extinguishing agent for computer centers, data/document storage areas, communications facilities, hospital operating rooms, control rooms, electronics manufacturing, museums, art galleries, laboratories and others. CLEANGUARD extinguishers leave no residue and require no cleanup after discharge.

Available in agent capacities of 2.5 lb. (1.13 kg) to 13.25 lb. (6.00 kg), CLEANGUARD extinguishers feature an effective discharge range of approximately 16 feet (4.9 m). Standard CLEANGUARD extinguishers include a six-year limited warranty, are made of a seamless, welded steel shell, 100% hydrotested and leak tested, coated in a tough polyester urethane paint and include extruded aluminum valves, plated steel valve stems, steel pick-up tubes and plated steel ring pins. Some models meet FAA Minimum Performance Standards (MPS) for civilian and commercial aircraft and are approved by the United States Coast Guard.

CLEANGUARD non-magnetic extinguishers offer many of the same features as the standard CLEANGUARD units, but are made for environments in which 100% non-magnetic extinguishers are required, such as magnetic imaging rooms, semiconductor fabrication facilities and similar applications.

ANSUL® K-GUARD® KITCHEN-CLASS EXTINGUISHERS

The “Front Line of Fire Protection,” K-GUARD fire extinguishers are designed specifically to fight some of the toughest fires of all—hot grease, cooking oil and fat fires in kitchens and food-prep areas of restaurants, convenience stores, food courts, hospitals, school cafeterias and others. Typical appliances that would benefit from K-GUARD protection include fryers, griddles, ranges, broilers, char-broilers, woks and more.

Filled with 1.6 gallons (6.00 L) of proven ANSULEX® low pH liquid fire suppressant, K-GUARD extinguishers quickly knock down flames, form a vapor-securing blanket and cool surrounding surfaces. Finished in polished stainless steel, K-GUARD extinguishers are listed by UL and ULC for “K” class fires and comply with NFPA 10. Effective discharge range of approximately 10 feet (3.1 m).

Make ANSUL your exclusive fire protection brand throughout your business. From automatic extinguishing systems and detection systems to a full range of wheeled and portable extinguishers, no other fire protection brand can promise the full range of solutions or the quality of ANSUL. Our products are supported by a worldwide network of factory-trained distributors — the largest in the industry.
